SYNOPSIS

The management of thoracic trauma involves more than tackling the anatomical injuries. Such injuries may involve organ systems outside of the thoracic cavity.

Trauma surgeons not only need the skill sets to manage injuries to thoracic region, but also must possess the knowledge, understanding and strategies in managing the challenging implications of such injuries.

We will share insights, key considerations, and experience in managing such injuries as a trauma surgeon. Our perspectives and strategies in managing such complexities, beyond anatomical injuries to the thoracic cavity, will help us gain confidence in managing our patients.

SPEAKER

Dr Tarek Razek

A Trauma/General Surgeon and Intensivist who is the current Director of the Adult Trauma Program at the McGill University Health Centre (MUHC), he completed his surgical training at McGill University and his trauma surgery/ICU fellowship at the University of Pennsylvania in Philadelphia.

He is also a Co-Director of the Centre for Global Surgery at the MUHC and actively participates in surgical and trauma development programmes in Tanzania, Rwanda, Mozambique, Ethiopia and other countries.

CHAIRPERSON

Adj Asst Prof Teo Li-Tserng

A Senior Consultant Surgeon and the Director of the Trauma Service and Trauma Training Centre of Tan Tock Seng Hospital, his roles include co-ordinating multi-disciplinary trauma care, post-graduate medical education in trauma and acute care, as well as trauma policy/audit.

In June 2019, he was appointed Medical Director, Central Region Trauma Services. This gave him the opportunity to lead and collaborate with pre-hospital services, 5 hospitals and the National Neuroscience Institute to manage a coordinated regional trauma system in the central part of Singapore. His clinical interests include trauma/acute care surgery and colorectal surgery.

- Limited slots are available first-come-first-serve
- +1 CME & CNE point with at least 80% attendance throughout the webinar
