## **Mission Statement**

To reduce the percentage of diabetic patients who have hypocount readings (blood glucose) going out of protocol limits (less than 4.0mmol/L and greater than 20mmol/L) by **30% within 2 years** (Feb 2015 to Feb 2017).

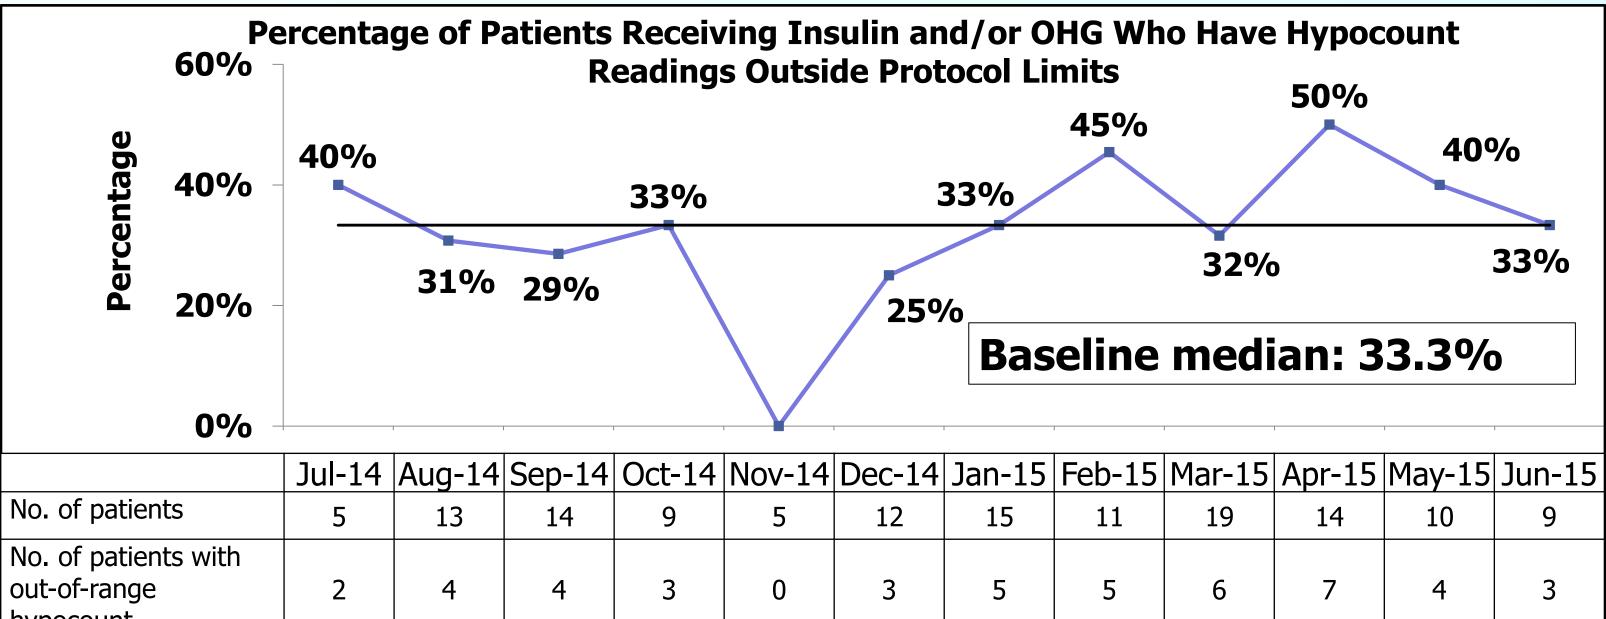

#### **Team Members**

Name/Designation/ Department	Role	Name/Designation/ Department	Role
Irene Lim, AD, CGQ	Programme Manager	Pan Jingzhou, Pharmacist, Pharmacy	Team Member
Jermain Chng, Exec, CGQ	Programme Manager	Zhou Zhenyu, APN, DNA	Team Member
Dr Giles Tan, SC, Gen. Psych 1	Clinical Lead	James Hu Chuanlei, SSN, Diabetes Nurse	Team Member
Dr Gena Gentozala Gellangala, Res. Phy, Gen. Psych 2	Clinical Lead	Samantha Ong, CN	Team Sponsor
Shi Chun Yan, SSN, W80A	Team Member	Adj Asst Prof Alex Su, VCMB(CQ)	Team Sponsor

Lee Sze Min, Snr Pharmacist, Pharmacy	Team Member	Bernard Wong, Mgr, NHG QRM	Advisor

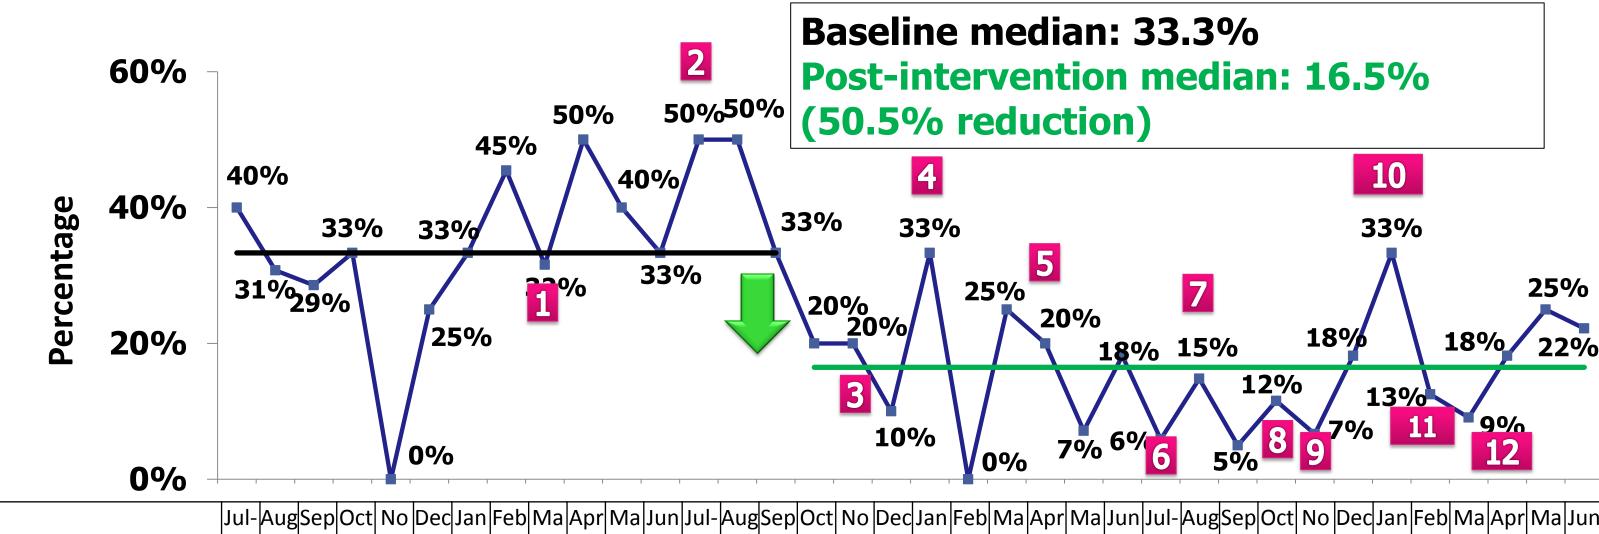

#### Implementation

Problem (S/N)	Interventions	Date
<b>G1</b>	1. Developed a Rescue Protocol which guides staff on how to manage patients with out-of-	Nov 2015
	range hypocounts.	
	2. The protocol was incorporated into a hospital-wide policy on diabetes management.	Mar 2017
G2, D5	1. Developed a Diabetes Care Plan for routine management of diabetic patients. The key	Nov 2015
	elements of the care plan include:	
	<ul> <li>Placement of newly-admitted diabetic patients on blood glucose monitoring</li> </ul>	
	<ul> <li>Measurement of HbA1c &amp; renal panel/kidney function test</li> </ul>	
	<ul> <li>Providing pre-meal diabetic medications within 30 minutes of meals</li> </ul>	
	<ul> <li>Restricting outside food for inpatients and educating family on this.</li> </ul>	
	2. The care plan was incorporated into a hospital-wide policy on diabetes management.	Mar 2017
<b>G3</b>	1. Designed a form for collecting data, and forms are uploaded to shared folder monthly	Jul 2015
	2. Shared the analysis of blood glucose monitoring data with all wards on a monthly basis	Apr 2017
<b>G4</b>	1. Standardised the timeframe for pre-meal diabetic medications to be given within 30	Jan 2016
	minutes of meals. This was placed into the Diabetes Care Plan	
	2. Tracked the percentage of patients with pre-meal diabetic meds and meals given within 30	Jan 2016
	mins of each other. Results was shared with the staff monthly	
	3. Created reminder sticker labels on the medication-serving device regarding the new	Oct 2016
	timeframe	
G5, D1,	1. Used education brochures from polyclinics to educate patient on diabetes and foot care.	Apr 2016
D3	2. Developed education brochure on hypoglycaemia management for use in the ward and also	
	given upon patient's discharge	Apr 2016
D4	1. Changed diabetic diet from 1500kcal to 1800kcal (with dieticians advice)	Oct 2016
	Results	

#### **Current Performance of a Process**

**Percentage of Patients Receiving Insulin and/or OHG Who Have Hypocount Readings Outside of Protocol Limits** 

#### **Flow Chart of Process**

#### **Old Process Flow**

#### **Diabetic patients are admitted to the ward**

**Only selected diabetic patients are placed on hypocount** monitoring

If hypocount reading is found to be <4mmol/L or >20mmol/L, nurses shall inform doctor on results

**Doctor decides the timeframe to review patient**

## **Problems Encountered**

Problem 1: Resignation of team members and lack of common availability of team members proved challenging to maintain project momentum. Problem 2: An audit revealed some wards still did not comply with our policy. Problem 3: Tedious collection of SHINe data.

## **Strategies to Sustain**

- 1. Positive results from pilot ward was shared with new teams to gain their buy-in.
- 2. One staff from pilot ward was invited to our progress meeting.
- 3. While spreading, we conducted ward briefings and presentations to newly-spread wards. Our contacts were given out for staff to contact us for clarifications
- 4. Feedback sessions were held to gather feedback from wards. We also sent monthly data to wards so staff will know if the protocols are working.
- 5. We upped the visibility of the protocols by providing posters to wards, and stickers on nurses' iPads as reminders.
- 6. Management's support was sought through various platforms e.g. I&I committee.
